

Safepour is the safe and cost effective way to decanter liquids in your work place.

The Safepour range removes the need to struggle with heavy and awkward drums of liquids, minimising back injuries and the risk of injuries caused by spillage, and saves the costs associated with fluid loss.

## Features SP15-25

- Redesign the way you pour. The SP15-25 has been developed to hold 15-25 litre rectangle/round/plastic/metal drums. Minimal assembly required and flat folding option for easy storage the SP15-25 is the ideal way to handle liquids in any work place.

## Features SP200

- The SP200 is designed to hold 200 litre or 44 gallon metal drums. The SP200 makes decanting heavy metal drums virtually weightless. The SP200 unique system allows for a metal drum to be automatically returned to a safe upright position when released. The SP200 is extremely durable with robust welded construction and powder coated finish.
- Fitted with castors for ease of mobility, two of which lock in position when needed.

## Features SP Multi Lifter

- The SP Multi lifter can be used to load 500kg drums safely into the SP200 decanting cradle as well as a variety of other drum lifting applications. Designed to eliminate the need for two separate lifting devices, it can be used to lift drums with sealed lids or an open drum. It also features a positive lock action which grips the rim of the drum for hands free safety throughout the lifting application.
